AGRICULTURE PRACTICES

SOIL PREPARATION

Preparation of soil is the first step before growing of crop. It helps to turn the soil and loosen it to allow the seeds to penetrate deep inside the soil and get the nutrients from the soil.

SOWING

Sowing is a process of planting seeds into the soil. During this agricultural process, proper precautions should be taken, including the appropriate depth, proper distance maintained, and soil should be clean, healthy and free from disease and other pathogens including fungus.

IRRIGATION

Irrigation is the process of applying water to the crops artificially to fulfil their water requirements. Nutrients may also be provided to the crops through irrigation. The various sources of water for irrigation are wells, ponds, lakes, canals, tube-wells and even dams.

HARVESTING

Harvesting is the operation of gathering the useful part or parts of the plant and is carried out at the time when all the nutrients have developed and the edible parts have reached the appropriate degree of maturity.

“
Once in your life you
need a doctor, a lawyer,
a policeman and a
preacher, but every day,
three times a day, you
need a farmer.”
”
